Bulk Ultrasonic Water Meter BUW

SKU: BUW

Doc No: BUW-DS-EN-10

Introduction

BUW Bulk Ultrasonic water meter comprises the quality temperature sensor, the flow sensor, and a flow computer. The temperature sensor measures the temperature of the water and the flow sensor to measure the volume of water that flows through the pipelines by the transit time difference. The two data are sent to the flow computer after being collected, the consumption water quantity is worked out, stored, and indicated on the LCD finally.

Features

- Ultrasonic water meter's intelligent measuring instrument consists of the temperature sensor, flow sensors, and flow computer;
- Could provide important application and data for many applications in the pipeline;
- Ultrasonic water meter is suitable for application environments requiring high range ratio(Q3/Q1)and forwards and reverse metering;
- The flow computer used sensor and through the time difference to collect temperature differences and sound waves to complete accurate measurement of water flow;
- And can provide important applications and data for many applications.
