Vizuo Software On Web

MN-VIZUO-EN

Mar-2020

1. Functions Change Log

Release Date	Version	Functions Change
Mar-2020	1.0	Update Menu Administration

2. Introduction

Vizuo is a web-based software application to remotely configure device, parameter, alarm and event. In addition, Vizuo displays current values, historical values of parameters as well as events, alarms. Values of parameter are stored on database of GLOBIOTS server. Below figure describes the system which uses Vizuo application software:

3. User Information and Actions

3.1 Sign in

- Open a web browser (Google Chrome/Firefox/Internet Explorer...).
- Enter address in URL: <http://vizuo.globiots.com/>
- Sign-in page displays as follow:

- Enter username and password
- Click “Sign in” button.

- After successful sign-in, Dashboard screen will appear:

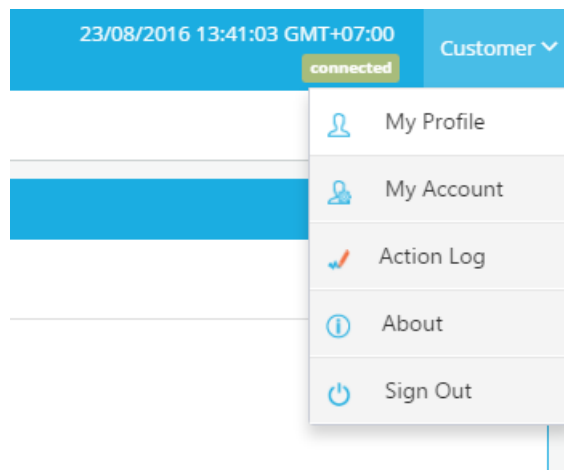

- For user first time sign-in or reset password, user’s password must be changed after successful sign-in
- Screen of change password:

- After changing password successfully, Dashboard screen will display.

3.2 User Profile

- To view User Profile, click user name on right corner screen → select My Profile:

- My Profile page displays as follow:

- Basic Information tab:
 - o Name: Name of user
 - o Verify: Click to send confirmation to email address or Contact Number

3.3 Verify email

In My Profile, tab Basic Information, click Verify in row Email. After clicking, verification email will be sent to the email. User logs in email, open verification email and click verification button in email to verify email. If verification is successful, button

Verify in row email should disappear

3.4 Verify Contact Number

In My Profile, tab Basic information, click Verify in row Contact Number. After clicking, authorization code will be sent SMS to user contact number and user enter this code to dialog to complete verification. If verification is successful, button Verify in row Contact Number should disappear

3.5 Account Information

To view Information of Account, click user name on right corner → select My Account. “My Account” page displays as follow:

3.6 Action Log

To view history of user action, click user name on right corner → select Action Log. “The list of Action Log” will displays as follow:

3.7 About

To view basic information of Vizuo application software, click user name on right corner → select About

3.8 Change Password

To Change Password, you click user name on right corner → select My Profile → Change Password tab, enter old password and new password, then click button Save Changes, and OK to confirm password change

3.9 Sign out

In Home page, select Username at top right corner→ click Sign Out

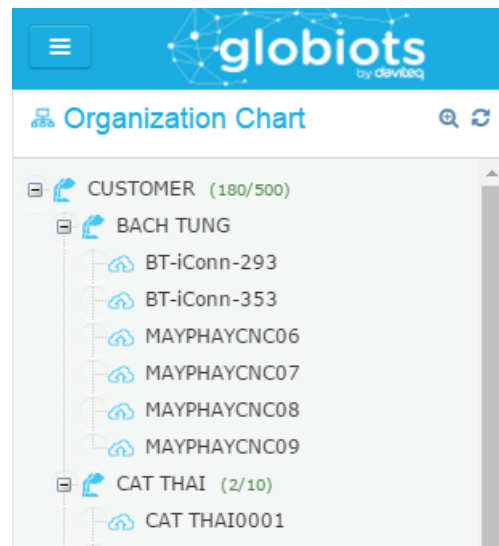

4. Configure Node

4.1 Node Definition

In Organization Chart Panel, Node is used to create Organization Chart. Node name should be geographical area, type of energy or responsible person. A Node includes one or more sub-Node and Device

4.2 Organization Chart

To close or open “Organization Chart” panel, you can click  on left corner of screen Organization Chart page includes all Node and Device in system:

- Node name
- Number using device of account/Max number device of account

Right click on Node name, menu of Node displays:

- New: Create new Node, Device
- Delete: Delete Node
- Assign to account: Assign Node and sub-Node to account
- Rename: Change name of Node

4.3 Create a Node

To Create a sub-Node:

- (1) Select Node
- (2) Right click and select “New”
- (3) Click “Node” to create new Node

- (4) Enter sub-Node name and click button Save, then click button OK to confirm

4.4 Rename Node

To change name of Node, right click on Node name → select Rename Or double click on Node. Enter new name and click button “Save Changes” to complete

4.5 Delete node

In Organization Chart, select Node that you want to delete, right click Node name → select “Delete”, click button OK. Enter Username and Password of Account to confirm

- Do not delete a Node that is assigned to account
- Do not delete a Node that includes sub-node

4.6 Assign Node to account

- In Organization Chart panel , select Node to assign to account, right click Node name → select “Assign to account” : A list account displays:

- Click “Assign” button to assign Node to account Or Click “Unassign” to un-assign Node from account.

5. Configure Device

5.1 Device Definition

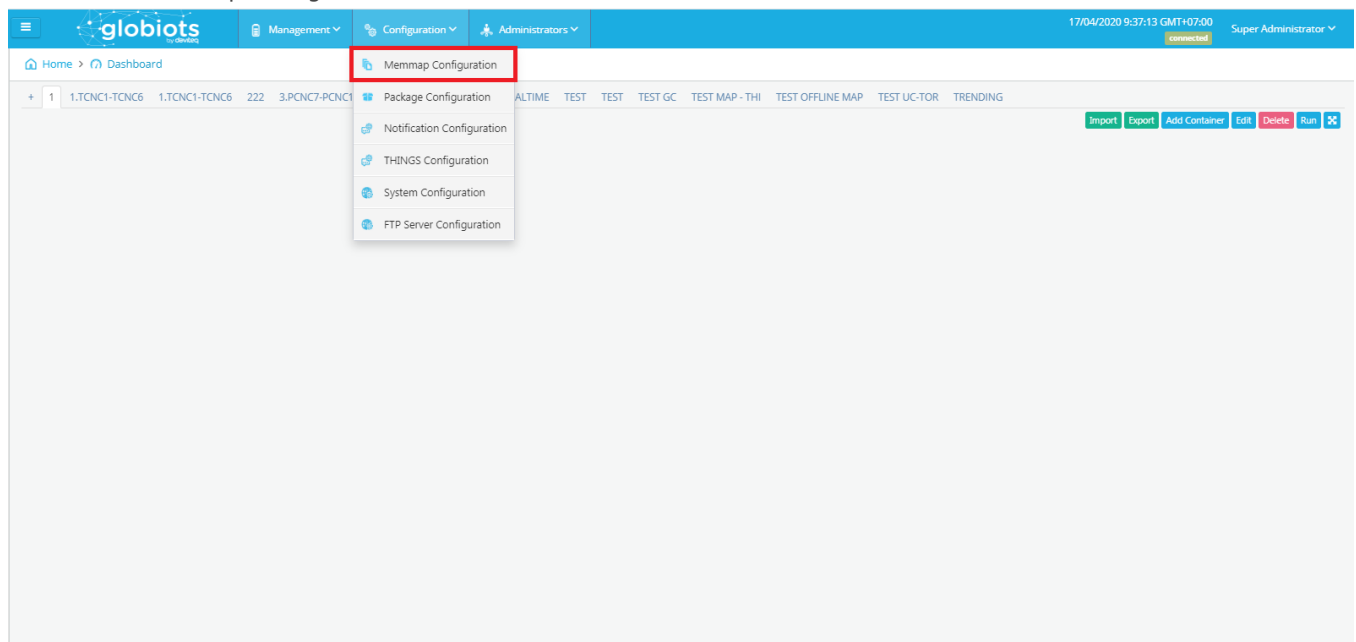

Device is smart gateway (iConnector). Device stores data from meter/sensor temporarily and then transmits data to server.

5.2 Create a new Memmap

Customer has to have a memory map excel file provided by manufacturer

To create a new Memmap:

(1) Select Memmap Configuration

(2) Click "Add Memmap" to create a new Memmap

- **Version:** version of MemMap

- **Address Start Logging:** Start address of the Logging configuration area, sync from server to iConnector
- **Address Start Modbus:** Start address of the Modbus configuration area, sync from server to iConnector
- **Address Start Alarm:** Start address of the Alarm configuration area, sync from server to iConnector
- **Address Start Event:** Start address of the Event configuration area, sync from server to iConnector
- **Address Start GPS:** Start address of the GPS configuration area, sync from server to iConnector

Click "Save changes"

(3) Select Memmap and click "Config"

(4) Click "Create Tab" and fill the name of tab

(5) Click "Add field" and fill information

- **Property:** description of field
 - **Type:** have two type: TextBox and Listbox
 - o TextBox: Write value directly to Address
 - o Listbox: Mapping value then write to Address
- Example: Mapping 0=4800, 1=9600, 2=19200

Edit Memmap Field

Property*: mbBaudrate

Type*: ListBox

Consts*
 0 - 4800 Delete
 1 - 9600 Delete
 2 - 19200 Delete
Add

Address*: 3802

Data Type*: Byte

Data Length*: 1

Read*: ☐

Write*: ☒

Value: 1

Cancel Save Changes

- **Address:** Address from Memmap file
- **Data Type:** Data Type from Memmap file
- **Data Length:** Data Length from Memmap file
- **Read:** tick to permit read
- **Write:** tick to permit write
- **Value:** Value write to Address

Click "Save changes"

Example: Memmap 3.6-9600

(1) DEVICE INFO

- **FCC:** IConnector's own secret code, used to register on Globiots
- **FW Version:** Software version
- **HW Version:** Hardware version
- **ICCID:** Seri number of SIM
- **MFD Date:** Date of manufacture
- **Model:** Product code
- **Serial Number:** The unique serial number of each iConnector, without duplication, is used to register on Globiots

- **SMS Alarm Mode:** = 1: Alarm SMS alarm from event, indicator when event from false to true
- **SMS Number of Alarm:** Number of SMS alarm (max 20)
- **SMS Alarm Code 1..10:** Set by event ID to notify SMS
- **SMS Alarm Label 1..10:** The label of the message sent the alarm

(7) SMS CONFIG

- **SMS Alarm Phone 1..6:** Phone number from 1 to 6

5.3 Create a new Device

To create a new Device:

- (1) Select Node
- (2) Right click and select "New"
- (3) Click "Device" to create a new Device

- (4) A box appears:

Name*	<input type="text" value="testttttttt"/>	
Serial Number*	<input type="text" value="121506200279"/>	
Device ID (Text)*	<input type="text" value="0.0.0.34"/>	<button>Generate</button>
Device ID (Hex)	<input type="text" value="00000022"/>	
FCC*	<input type="text" value="8865"/>	
Phone number*	<input type="text" value="1111"/>	
Created Date*	<input type="text"/>	🕒
Last Updated*	<input type="text"/>	🕒
Attached Date*	<input type="text"/>	🕒
Last Signed In*	<input type="text"/>	🕒
Status*	<input type="text" value="Registered"/>	▼

- Enter parameters of Device:
 - o Name: Name of Device (require 12 characters)
 - o Serial Number: provided by manufacturer (require 12 characters)
- Click “Generate” button to create Device ID or enter ID directly
- FCC: provided by manufacturer (require 4 characters)
- Phone number: Enter phone number of SIM in iConnector if available
- Click “Save” button to continue. A box appears:

- o Memmap: select memory map version provided by manufacturer

Note: In case Iconnector updates to a new Firmware, you need to update a new Memmap

To update a new Memmap:

- (1) Double click Name of Device

(2) Click Configuration

(3) Select new memory map version provided by manufacturer

(4) Click "Save Changes" to finish

o Logging send frequency: Frequency to send logged data from iConnector to server

o Heath send frequency: Frequency to send logged data about iConnector health from iConnector to server

Click "Save" to continue, click button OK to confirm, and enter admin user and password to verify permission

5.4 Delete Device

To delete a Device: Right click Device name and select Delete and click OK to confirm

5.5 Configure Parameter

Click on Device, right-click, select Parameter

In List Parameters Page

List Parameters Of 'CAT THAI0001'							
<div> <div>Import Parameter</div> <div>Export Parameter</div> <div>Add Parameter</div> <div>Delete All</div> </div>				<div> <div>Show 5 Rows</div> <div>Search</div> </div>

Showing 1 to 5 of 29 entries				<div> <div>First</div> <div>Previous</div> <div>Next</div> <div>Last</div> </div>			

- “Import Parameter”: click to Import Parameters from excel file. Excel file must have default structure.
- “Export Parameter”: click to export parameter to excel file.
- “Add parameter”: click to add a new parameter.

o Name: parameter name

o Type: Real Parameter or Virtual parameter

☐ Real Parameter: Parameter from iConnector

☐ Virtual Parameter: Parameter only in Server. Virtual parameter is create from formula of one or multi real parameter

☐ If type is Virtual parameter, formula in Expression should be added

Mathematical Operators

Operator	Description
+	Additive operator / Unary plus
-	Subtraction operator / Unary minus
*	Multiplication operator, can be omitted in front of an open bracket
/	Division operator
%	Remainder operator (Modulo)
^	Power operator

Boolean Operators

Operator	Description
=	Equals
==	Equals
!=	Not equals
<>	Not equals
<	Less than

<=	Less than or equal to
>	Greater than
>=	Greater than or equal to
&&	Boolean and
	Boolean or

Supported Functions

Function*	Description
NOT(<i>expression</i>)	Boolean negation, 1 (means true) if the expression is not zero
IF(<i>condition</i> , <i>value_if_t</i> ◀  ▶	Returns one value if the condition evaluates to true or the other if it evaluates to false
RANDOM()	Produces a random number between 0 and 1
MIN(<i>e1</i> , <i>e2</i> , ...)	Returns the smallest of the given expressions
MAX(<i>e1</i> , <i>e2</i> , ...)	Returns the biggest of the given expressions
ABS(<i>expression</i>)	Returns the absolute (non-negative) value of the expression
ROUND(<i>expression</i> , <i>pr</i> ◀  ▶	Rounds a value to a certain number of digits, uses the current rounding mode
FLOOR(<i>expression</i>)	Rounds the value down to the nearest integer
CEILING(<i>expression</i>)	Rounds the value up to the nearest integer
LOG(<i>expression</i>)	Returns the natural logarithm (base e) of an expression
LOG10(<i>expression</i>)	Returns the common logarithm (base 10) of an expression
SQRT(<i>expression</i>)	Returns the square root of an expression
SIN(<i>expression</i>)	Returns the trigonometric sine of an angle (in degrees)
COS(<i>expression</i>)	Returns the trigonometric cosine of an angle (in degrees)
TAN(<i>expression</i>)	Returns the trigonometric tangens of an angle (in degrees)
COT(<i>expression</i>)	Returns the trigonometric cotangens of an angle (in degrees)
ASIN(<i>expression</i>)	Returns the angle of asin (in degrees)
ACOS(<i>expression</i>)	Returns the angle of acos (in degrees)
ATAN(<i>expression</i>)	Returns the angle of atan (in degrees)
ACOT(<i>expression</i>)	Returns the angle of acot (in degrees)

ATAN2(<i>y,x</i>)	Returns the angle of atan2 (in degrees)
SINH(<i>expression</i>)	Returns the hyperbolic sine of a value
COSH(<i>expression</i>)	Returns the hyperbolic cosine of a value
TANH(<i>expression</i>)	Returns the hyperbolic tangens of a value
COTH(<i>expression</i>)	Returns the hyperbolic cotangens of a value
SEC(<i>expression</i>)	Returns the secant (in degrees)
CSC(<i>expression</i>)	Returns the cosecant (in degrees)
SECH(<i>expression</i>)	Returns the hyperbolic secant (in degrees)
CSCH(<i>expression</i>)	Returns the hyperbolic cosecant (in degrees)
ASINH(<i>expression</i>)	Returns the angle of hyperbolic sine (in degrees)
ACOSH(<i>expression</i>)	Returns the angle of hyperbolic cosine (in degrees)
ATANH(<i>expression</i>)	Returns the angle of hyperbolic tangens of a value
RAD(<i>expression</i>)	Converts an angle measured in degrees to an approximately equivalent angle measured in radians
DEG(<i>expression</i>)	Converts an angle measured in radians to an approximately equivalent angle measured in degrees

Supported Constants

Constant	Description
e	The value of <i>e</i> , exact to 70 digits
PI	The value of <i>PI</i> , exact to 100 digits
TRUE	The value one
FALSE	The value zero
NULL	The null value

Note: Virtual parameter can't use for event.

Example 1:

Value of Virtual Parameter have address at 2012 is calculated as follow [2012] = [2000] + [2002.]In which address 2000 and 2002 are two real parameters

Example 2:

IF [2000]>10 then [2005]=1

IF [2000]<=10 then [2005]=2

Example 3:

IF [2000]=1 And [2005]=2 then [2010]=5

IF [2000]=!1 And [2005]=!2 then [2010]=[2007]+10

Example 4:

IF [2000]>10 then [200A]=1
IF [2000]<10 And [2010]=1 then [200A]=5
IF [2000]<10 And [2010]!=1 then [200A]=10

- o Unit: Unit of parameter
- o Logged: Tick to permit saving value of parameter into database
- o Logging Priority: enter any value
- o Logging Frequency: select frequency to log data from meter/sensor/device/instrument into iConnector memory
- o Time to live: select how long data will be stored in database
- o Data Type: Type of parameter
- o Data Length: Length of data type, byte unit, display automatically with data type. If data type is String, data length should be input
- o Address: Address in iConnector memory map to store value of parameter
- o Decimal Places: number of decimal after the comma.
- Save: click to finish
- “Delete All”: click to delete selected parameters
- Edit: click to edit this parameter
- Delete: delete parameter
- Add Alarm Configuration: Click to add Alarm for parameter

- o (1) Display Device name & Parameter.
- o (2) Enter Alarm value:
 - ☐ Hysteresis of HiHi, Hysteresis of Hi, Hysteresis of Lo, Hysteresis of LoLo: Enter any value, there are 4 level for Alarm.
 - ☐ HiHi: Value at very high level.
 - ☐ HiHi Comment: Comment of very high level.
 - ☐ Hi: Value at high level.
 - ☐ Hi Comment: Comment of high level
 - ☐ Lo: Value at low level.
 - ☐ Lo Comment: Comment of low level.
 - ☐ LoLo: Value at very low level.
 - ☐ LoLo Comment: Comment of very low level.
- o Click “Save” button and then click button OK to save Alarm Configuration for parameter.

Note: After Configure Parameter, you must synchronize (refer to 5.11 Synchronize Device for more details)

5.6 Configure Modbus Command

- Select Device, right-click, select Modbus Command

- o Response Location: Address of parameter in iConnector
- o Slave ID: Modbus ID of meter/sensor/device/instrument which connect to iConnector through RS485 port
- o Function Code: Function Code of Modbus Command. Function Code consist of read function and write function. In user manual of meter/sensor/device/instrument should mention supported function code.
- o Parameter 01: Starting address of parameter in memory map of meter/sensor/device/instrument
- o Parameter 02: Number of registers of parameter in memory map of meter/sensor/device/instrument
- o Button “Add”: Click to add new Modbus Command
- o Button “Update”: After click “Edit” button in (1), “update” will display. After editing Modbus command and click “Update” to save change.

Note:

- Response Location in iConnector for read Modbus data :0x2000 -> 0x21FF
- Response Location in iConnector for write Modbus data: 0x3000 -> 0x307F
- After configuring, Modbus Command should be synchronized to iConnector (refer to 5.11 Synchronize Device for more details)

Example:

Configure modbus command for reading parameter Voltage, data type: float, from address 0000 on power meter (ID=32) and store at address 2000 on iConnector, using function 04 of modbus command. The configuration as follow:

Explanation:

ID=32 (decimal) =20 (Hexa) = Slave Address

Parameter 01 = Start Address = 0000

Parameter 02 = Number of register of parameter. Data type = float (4 bytes) = 02 register

5.7 Configure Alarm

- To configure Alarm: Right click Device name and select Alarm. “List Alarms” page appears:

- Click “Edit” to edit alarm (refer to 5.4 Configure Parameter → Add Alarm Configuration for more details)
- Click “Delete” to delete alarm

Note: After configure Alarm, synchronization must be done (refer to 5.11 Synchronize for more details)

5.8 Configure Event

To configure Event: right click Device name and select Event. “The List Of Event” page displays as below:

[Home](#) > [The List Of Event](#)

List Events Of 'REMOTEMS0279'								
Show 10 Rows						Import Event	Export Event	Add Event
Search

□ Action Name: Name of Action

□ Action Type: Select type of Action. There are 04 type of available action

1. Type 1: 01- Parameter vs constant: Action to assign constant to parameter if condition is true

2. Type 2: 02-parameter vs parameter: Action to assign constant to parameter if condition is true and false

3. Type 3: Action to assign value of source parameter to value of destination parameter if condition is true

4. Type 4: Action to assign value of source parameter to value of destination parameter if condition is true and

false

□ Repeat: tick to implement action once condition is still true. If Repeat: is not ticked, the action only is

implemented when condition from FALSE to TRUE.

□ Value true: constant assigned to parameter when condition is true

□ Value false: constant assigned to parameter when condition is false

□ Write Parameter: Destination parameter which is assigned value

□ Read Parameter: Source parameter

□ True Parameter: Source parameter if condition is true

□ False Parameter: Source parameter if condition is false

□ Save: click "save" to finish

o Edit: click to edit action of event

o Delete: click to delete action

Note: Written parameter in action must have address in range 3000-307F

• Condition: click to configure condition of event. An event might have one or multi conditions. Value of total condition is formed from logical operator of multi conditions

The screenshot shows a web interface titled "The List Of Conditions". It includes a "Back" button, an "Add Condition" button, and a search bar. Below these is a table with columns: Condition Name, Condition Type, Primary Parameter, Comparison Operator, Secondary Parameter, and Constant. One condition is listed: "Level switch ON" with type "01 - Parameter vs Constant", primary parameter "Level_Switch", comparison operator "== Equal to", and constant "1". A context menu is open over the first row with "Edit" and "Delete" options. Navigation buttons "First", "Previous", "Next", and "Last" are at the bottom right.

Condition Name	Condition Type	Primary Parameter	Comparison Operator	Secondary Parameter	Constant
Level switch ON	01 - Parameter vs Constant	Level_Switch	== Equal to		1

o Add Condition: click to add new condition

The screenshot shows the "+ Add Condition" form. It has fields for "Name*" (filled with "Fuel Loss"), "Type" (dropdown menu showing "01 - Parameter vs Cons..."), and "Condition*" (which includes a parameter dropdown showing "Param 1", a comparison operator dropdown showing "< Less than", and a constant input field showing "-10"). At the bottom are "Cancel" and "Save" buttons.

□ Condition Name: Name of condition

□ Condition Type: Type of condition. There are 3 types of condition

+ Type 1: 01- Parameter vs constant: Compare value of parameter to constant

+ Type 2: 02-parameter vs parameter: Compare value of parameter to value of another parameter

+ Type 3: 03- Parameter (bit) vs constant: Compare value of bit complex of parameter to constant

□ Condition: Compare value of a parameter to constant or value of a parameter to value of another parameter.

Compare Operators are less than, less than or equal to, equal to, not equal, greater than, greater than or equal to

□ Click "Save" to finish

o Edit: click to edit condition of event

Edit Condition

Name*
Fuel Loss

Type
01 - Parameter vs Cons...

5.9 Clone Device

To create a new Device have same Parameters, Alarm Config, Modbus Command, Menmap, Event Configure ..., select original Device, right-click, select "clone". Below page appears

Refer to 5.2 "Create a new Device" for more details.

5.10 Replace Device

To replace Device:

- Right click Device name and select Replace
- A box displays:

Replace Device

Serial Number*

121601210350

FCC*

1660

Status*

Registered

Cancel

OK

- o Enter serial number and FCC of new Device
- o Click "OK" to continue
- A box appears

Click "Yes" to finish

5.11 Rename Device

To change name of Device: Right click Device name, select Rename, and enter new name

5.12 Synchronize Device

To change name of Device: Right click Device name, select Synch, and tick type of configuration to synchronize to iConnector, click Sync, enter password to confirm permission

After successful synchronization, Text Synchronized should appear on 4 line of dialog box. If iConnector disconnected, message should appear to inform that synchronization will implement once iConnector connect to server.

5.13 Edit Device

To Edit Device, click Device, “Edit Device” page appears as follow:

5.13.1 Basic information

To view and edit basic information of Device, In Edit Device page, select Basic Information Tab.

- Click “Replace” to change a new Device (refer to 5.9 Replace for more details)
- Click “Save Changes” to save

5.13.2 Configuration

In Edit Device Page, select Configuration Tab.

[Edit Device 'DEMO LEVEL01 - 0.0.0.14'](#)

- Memmap: Memmap version of iConnector
- Logging send frequency: frequency to send logged data from iConnector to server
- Heath send frequency: frequency to send logged data about iConnector health from iConnector to server
- Logging: synchronize status of logged parameters.

Select “Unsynchronized” and click Save Changes after changing parameter configuration to synchronize new parameter configuration from server to iConnector

- Modbus Config: synchronize status of modbus command.

Select “Unsynchronized” and click Save Changes after changing Modbus Command configuration to synchronize new Modbus Command configuration from server to iConnector

- Alarm config: synchronize status of alarm configuration

Select “Unsynchronized” and click Save Changes after changing alarm configuration to synchronize new alarm configuration from server to iConnector

- Event config: synchronize status of event configuration

Select “Unsynchronized” and click Save Changes after changing event configuration to synchronize new event configuration from server to iConnector

5.13.3 Monitoring

In Edit Device Page, select Monitoring Tab.

- Health Status: display Connection status between iConnector and server (Connected/Waiting for connect/Disconnected)

- Config Status: display synchronization status (Synchronized or Unsynchronized)

6. Management

6.1 Dashboard

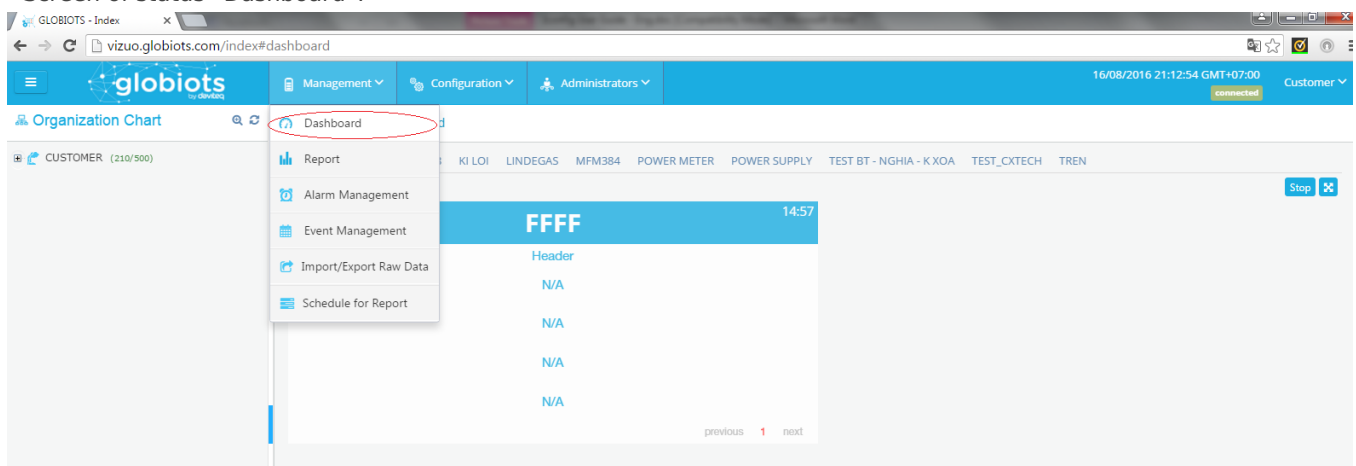

6.1.1 Dashboard Description

Dashboard views input text, current value and value from database. Each Dashboard is organized in one tab. When value is from database, dashboard will update the value after specific time. Dashboard consists of containers which contain widgets inside.

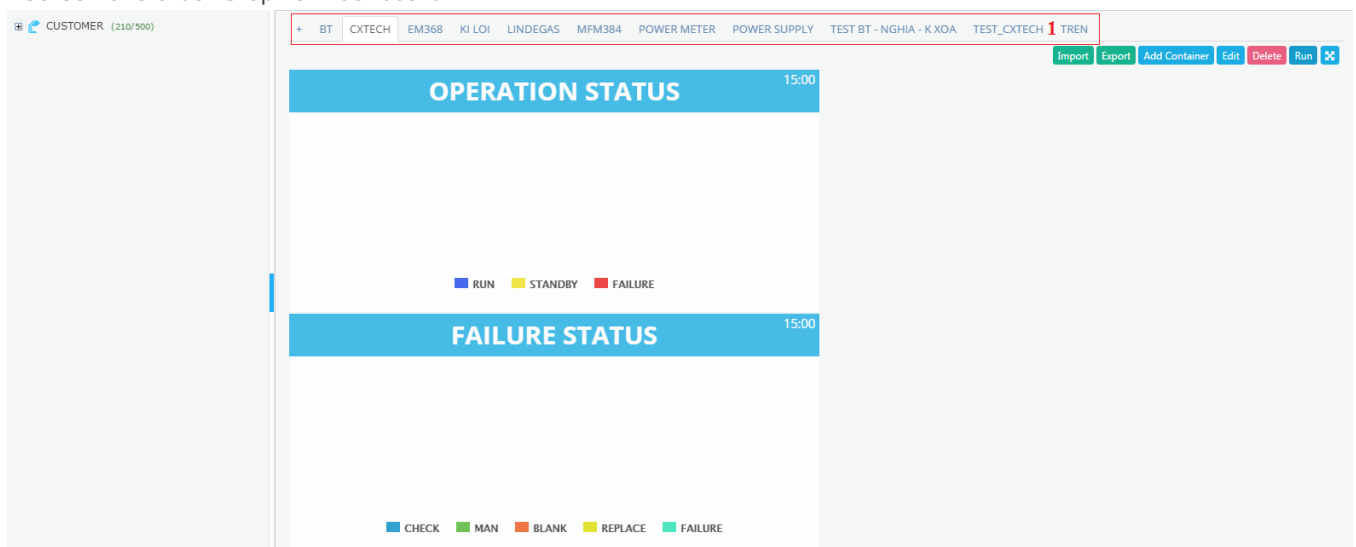

6.1.2 View Dashboard

- In Home screen, select menu Management → select sub-menu Dashboard to display current value of parameters.

- Screen of status “Dashboard”:

- Screen of status “Stop” of Dashboard:

- (1): Display list of Dashboard tabs which user are assigned to view
- Button “Run”: click to run Dashboard.
- Button “Stop”: click to stop selected Dashboard.
- Button “Delete”: click to delete Dashboard
- Button “Edit”: click to edit Dashboard
- Button “Add Container”: click to add new Container in Dashboard
- Button : click to fullscreen
- Button “Export”: click to export Dashboard to Excel File
- Button “Import”: Click to import Dashboard to Excel File

6.1.3 Create new Dashboard

- In Dashboard screen, click symbol “+” to create new tab

- New window display

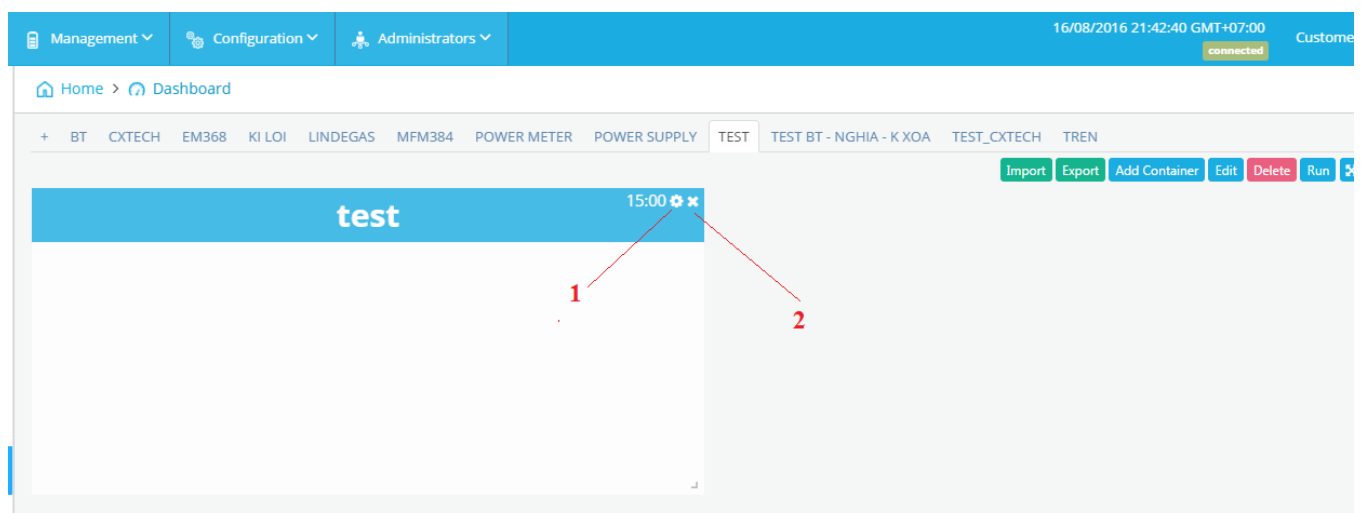

- Name: Name of new Dashboard tab
 - Stop realtime after: Running time of Dashboard to get realtime data from iConnector. After this period of time, Dashboard will stop to get realtime data from iConnector.
- Click button “Run” on top right corner to continue to get realtime data
- Push Interval: Frequency to get realtime data from iConnector
- Click Save to complete creating new Dashboard

6.1.4 Create New Container

- In Dashboard tab, click Add Container to add new Container

- Title: Name of container
 - Format: Font size, Style, Text color, Text align, Background.
 - Poll Interval: Frequency to get logged data from database to view on Dashboard
 - Layout: Select layout of container. There are 07 layouts select
- Click Save to complete creating Container

6.1.5 Configure a Container

- (1): Edit Container
(2): Delete container.

Click  to Edit Container. Following screen will appear

Configure cell [0, 1]

Style **B** *I* U **1** Font size 15 px

Text color #1BADE1 Text align Center

Data type Device » Realtime

Parameter Device **2** » Parameter

Up/Down Icon ☐

Mapping ☐

Cancel Save

(1): Format

(2): Configure

Choose Data type: Constant (input text), Data from Database (Device Name, Parameter Name, Unit of Parameter, Last value of parameter in Database, time stamp of last value), Data from device (Realtime Data or Current Data). Realtime data is data push from iConnector and Current Data is data pull from iConnector

Up/down icon: Tick to add up/down icon. Up icon appears when last value is less than current value whereas down icon appears when last value is greater than current value. These icons are available when realtime data is displayed in cell

Mapping: tick Mapping and list out value and mapped text, then click to add mapping value. Mapping should be used to view meaningful text instead of value

6.1.6.3 Widget Line Chart

Click  to configure widget Line Chart, the following screen appear

- Title: Line Chart name
- Style: Format of Title
- YAxis: Fixed or Auto. If choose Fixed, enter min & max value. If select Auto, software will specify Max of Y axis based on value of displayed parameter.

- Type: Data type of parameter to view (Data from device or from database)

Type Device: Realtime data and display Max point value on line chart

Type Database: Logged data from database, time period include: Today, Yesterday, Last 3 days or Custom (From...To)

- Line configuration: Select displayed parameter and displayed label (input text, parameter name or device name)

Click Add button to add parameter to line chart. A line chart could view some parameters

6.1.6.4 Linear Gauge

Click  to configure widget Line Gauge, the following screen appear

- Title: Name
- Style: Format of title
- Direction: Vertical or Horizontal Linear Gauge
- Min, Max: Range of Gauge
- Range Color: Auto or Custom

Auto: Color of Gauge changes according to value of parameter

Custom: Configure specific color to specific range of value of parameter

- Data: Select type of display parameter (last logged data from Database or current value/realtime value from Device)

- Device/Parameter: Select displayed parameter
- Write: Tick to enable to write value to parameter. Writing value to parameter by holding and drag on body of Linear Gauge

Click Save Changes to complete configuration

6.1.6.5 Solid Gauge

Click  to configure widget Solid Gauge, the following screen appear

- Title: Name
- Style: Format of title
- Min, Max: Range of Gauge
- Range Color: Auto or Custom

Auto: Color of Gauge changes according to value of parameter

Custom: Configure specific color to specific range of value of parameter

- Data: Select type of display parameter (last logged data from Database or current value/realtime value from Device)
- Device/Parameter: Select displayed parameter

Click Save Changes to complete configuration

6.1.6.6 Circular Chart

Click  to configure widget Solid Gauge, the following screen appear

- Title: Name
- Style: Format of title
- Min, Max: Range of Chart
- Range Color: Auto or Custom
- Auto: Color of Chart changes according to value of parameter
- Custom: Configure specific color to specific range of value of parameter
- Data: Select type of display parameter (last logged data from Database or current value/realtime value from Device)

- Device/Parameter: Select displayed parameter

- Write: Tick to enable to write value to parameter. Writing value to parameter by holding and drag on body of

Circular Chart

Click Save Changes to complete configuration

6.1.6.7 Column Chart

Click  to configure widget Solid Gauge, the following screen appears

- Title: Column Chart name
- Style: Format of Title
- Type: Data type of parameter to view (Data from device or from database)
- Type Device: Realtime data
- Type Database: Logged data from database, last value or value series in time period include: Today, Yesterday, Last 3 days or Custom (From...To)

Click Add button to add parameter to column chart. A column chart could view some parameters

- Column configuration: Select displayed parameter and displayed label (input text, parameter name or device name)

Click Add button to add parameter to column chart. A column chart could view some parameters

If location is dynamic, configure longitude and latitude parameter

6.1.6.10 EMS Report

EMS Report views report for energy consumption during period of time

Click  to configure widget EMS report, the following screen appears:

- Title: Report title
- Style: Format of tittle
- Report type: Daily, Weekly, Monthly
- Data range: Today, yesterday, last month, this month, last week, this week
- Column Configuration: Configure displayed value of parameter and displayed name of parameter

Click Add to add parameter for report

6.1.6.11 Pie Chart

Pie Chart compares values between some parameters. Click to configure widget EMS report, the following screen appears:

- Title: Tittle of pie chart
- Style: Format of tittle
- Type: Data type, realtime data or current value of device or last value in database
- Configuration: Configure displayed value and displayed name of parameter

6.2 Report

6.2.1 Create a new report

- To create a new report:
 - In menu Management, select Report
 - In Report page select “+” to create a new tab

- Report Page will display as follow:

Enter full information

- o Name: Name of Report tab
- o Report Type: EMS (for energy), CNC (for CNC machine), Historical Trending (for parameter trend)
- o Parameter Configuration:
 - ☐ Name: Name of parameter which display in report. Name might input text or name of parameter.
 - ☐ Device: select Device
 - ☐ Parameter: select parameter of device which you want display
 - ☐ Click “Add” to add parameter. A report might have some parameter
- o After complete adding parameter, click “save” to finish

6.2.2 Configure Report

- In Report page, select Report name which you want configure

- Click “Delete” to delete report
- Click “Edit” to edit report

- ☐ To edit available parameter, click  in Action column, edit parameter, click Update
- ☐ To delete parameter, click  in Action
- ☐ To Add new parameter: enter full information and click “Add”

6.2.3 View report

Select Time in “From ... To ...” and click “Show” to view data of parameters on report tab

Click on name of parameter (below report) to temporarily ON/OFF parameter on report

6.2.4 Export report

After click button Show to view report, click on top right corner of screen, select Export to Excel or Export to pdf or Export to csv

☐ Click Export to Excel, select version of Excel (2003 or 2007), click Export. The exported file will be store on your PC

☐ Click Export to csv, select version Date Format in csv file, click OK. The exported file will be store on your PC

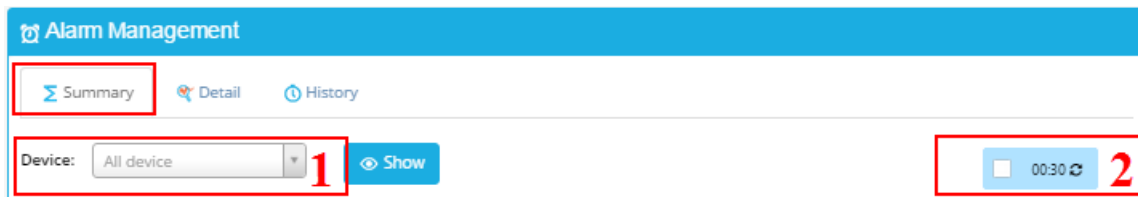

☐ Click Export to pdf, the exported file will be store on your PC

6.3 Alarm Management

In Home page, select menu Management → select sub-menu Alarm Management to display details of alarm of Device.

6.3.1 Alarm Summary

In screen of Alarm Management, click tab Summary: to view active alarm.

(1) Select Device to view Alarm:

☐ After select Device, click button “Show” to view all active alarm of selected Device.

☐ After click “Show”, screen of active alarm should appear:

(1) Display alarm of selected Device:

☐ Time: time when alarm occurs.

☐ Date: date when alarm occurs.

☐ Device Name: display name of selected Device.

☐ Parameter Name: display name of parameter which is alarmed.

☐ State: display status of alarm (HiHi, Hi, Lo or LoLo)

☐ Value: display value of parameter when alarm occurs.

☐ Comment: display comment of alarm

(2) Select number of alarm displayed in one page.

6.3.2 Acknowledge Alarm

- Click **Acknowledge** to confirm selected Alarm. Confirmation screen should appear:

- Enter content of confirmation and then click button “Acknowledge” to save the content.

- After alarm confirmation, red text in alarm row of the list should be changed to green text. Content of confirmation should appear in column “Solution” of tab Alarm History.

6.3.3 Acknowledge all Alarm

- Click button to acknowledge all displayed Alarm.

6.3.4 Details of Alarm

- In screen of Alarm Management, click tab Detail: to view detail of Alarms:

(1) Select Device to view Alarm:

(2) Display period of time to view Alarm:

- Custom: to enter start date and end date to view alarm. Maximum period of time is one month.
- After select Device and period of time, click button “Show” to view Alarm:

6.3.5 Alarm History

- In screen of Alarm Management, click tab History: to view all historical alarms

6.3.6 Export Alarms

- In screen of Alarm History, click button **Export** to export Alarms to Excel file. Screen of alarm export should appear:

- Choose excel version: select Excel version of exported file: Excel 2003, Excel 2007 or Higher
- Choose number of item: select number of alarm to be exported: 50, 100, 200 Alarms
- Click “Save” to export Alarm list.
- Exported Alarm list should display:

6.4 Event Management

- In Home screen, select menu Management → select sub-menu Event Management: to view historical events.

(1) Select Device to view Event:

(2) Period of time to view Event:

- Custom: select start date and end date to view events. Maximum period of time is one month.
- After select Device and period of time, click button “Show” to view Event:

6.5 Import/Export Raw Data

6.5.1 Import

- In menu Management, select Import/Export Raw Data
- Select Import tab

- Type: Manual or file
 - Manual: data enter from keyboard
 - File: data load from excel file. Excel should have suitable format
- Parameter: select Device and Parameter
- TimeZone: select time zone
- Timestamp: select time stamp of data
- Value: value of data
- Add: after enter full information, click “Add” to add value of parameter at specific time into list below

Click Check to show table to know input value and value on database

Click Import data into database to import value of parameter into

database. If old data are available on database, user should confirm override old data

6.5.2 Export

- In menu Management, select Import/Export Raw Data

- Select Export tab

- Parameter: select Device and Parameter
- TimeZone: select time zone
- Data format: select Data format for export time
- From ...To: Duration of time to export

Click “Export” to export value of parameter to csv file

6.6 Configure Schedule to Email Report

From menu Management, click sub-menu Schedule for Report, click Add button to add schedule for report

- Name: Name of schedule
- Activated: Tick to active schedule
- Report type: Select type of report. There are 2 types of report available (CNC and EMS). Frequency of sending report depend on report type (daily, weekly, monthly).
 - Choose Report: click inside box or click Config to choose report to email
 - Send report to group or user: click inside box or click Config to choose group and user who receive email.
 - Time to send report is begin time of days which is configured in Account

Note: Email of user must be verified before configuring schedule to email report. Refer 2.1.3 Verify Email for more details

Click button “OK” to finish.

- If number of unused user of account > 0, user will be created successfully. Number of used user should increase by 1.

- If number of unused user of account is equal to 0, user will not be created successfully.

Screen of notification should appear when number of unused user of account is equal to 0:

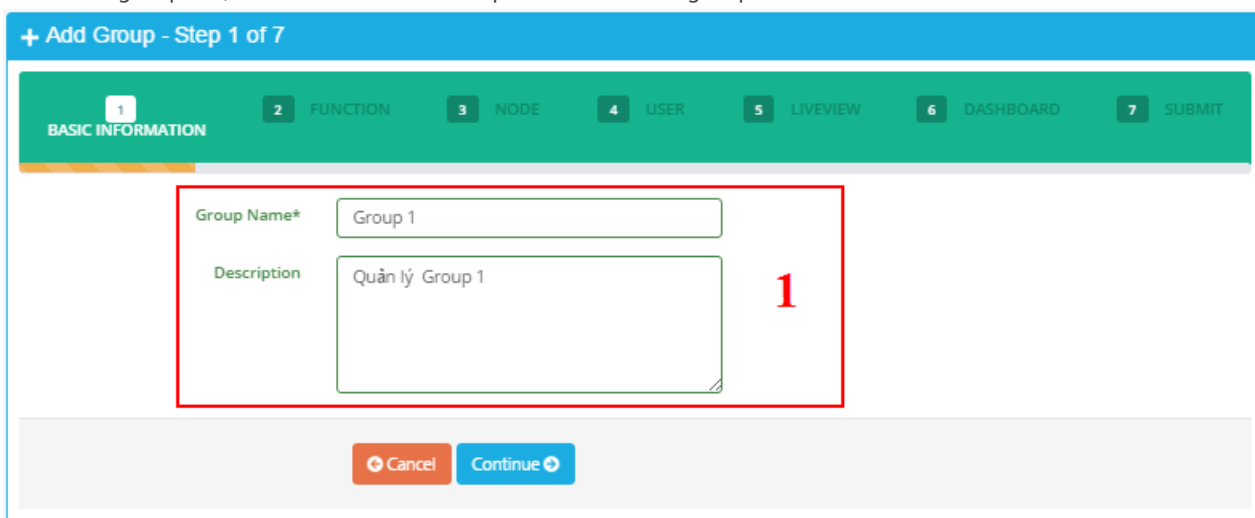

A simple, empty rectangular box with a thin grey border, intended for a notification message.

8.3 Group Management

- Group is used to assign authorities to users.

- In Home screen, select menu Administrators → select sub-menu Group Management

- In screen of group list, click button “Add Group” to create new group of account.

A screenshot of the "Add Group - Step 1 of 7" form. The form has a blue header bar with the title "+ Add Group - Step 1 of 7". Below the header is a green navigation bar with seven steps: 1. BASIC INFORMATION, 2. FUNCTION, 3. NODE, 4. USER, 5. LIVEVIEW, 6. DASHBOARD, and 7. SUBMIT. Step 1 is currently active. The main content area has a white background. It contains two input fields: "Group Name*" with the value "Group 1" and "Description" with the value "Quản lý Group 1". A red rectangular box highlights these two fields, and a large red number "1" is placed to the right of the box. At the bottom of the form, there are two buttons: "Cancel" in an orange box and "Continue" in a blue box.

Enter basic information of group into panel (1).

- Group Name: Enter group name. Group name is unique.

- Click button “Continue” to go to step 2.

- After click button “Continue”, screen of step 2 should appear:
